Graphics by COREL™

Unable to adjust Line Spacing values, in the format text dialogue.

DocumentID: 205823
Revision Date: 11/29/2000 1:42:06 PM

The information in this document applies to:
CorelDRAW ™ 10

Problem

When trying to adjust the line spacing of text under Text\Format Text, manually typing in a new value, or clicking on the Up or down arrows have no effect. The new value always resets back to the original value.

Answer:

Click on the lock beside the apply button, so it becomes inactive.
Then input or adjust the line spacing value, then click apply to have the changes take effect.

Details:

Product specifications, packaging, technical support and information (*Specifications*) refer to theUnited States retail English version only. Specifications for other versions may vary. All Specifications, claims, features, representations, and/or comparisons provided are correct to the best of our knowledge of the date of publication, but are subject to change without notice.OUR MAXIMUM AGGREGATE LIABILITY TO YOU AND THAT OF OUR DEALERS AND SUPPLIERS IS LIMITED. Unable able to apply more than one decimal place for an outline thickness.

DocumentID: 205827
Revision Date: 12/5/2000 3:15:39 PM

The information in this document applies to:
CorelDRAW ™ 10

Problem

In the Outline Pen Dialogue window, and on the Outline Tab in the Properties Docker window, it will only keep an input of one decimal place. All other decimal places will be rounded off.

Answer:

Select the object, on the property bar input the outline width.
Entering a value here will allow as many decimal places that the Drawing Precision is set for.
The Drawing Precision setting can be altered under
Tools\Options\Edit

Details:

Note:
For Multiple Object selections, the option on the property bar is not avialable. To add this:
Click Tools\Customization, then select commands.
For the category, select Fill and Outline.
Scroll down to Outline Width, and drag it off of the window.
Click O.K. then drag the new toolbar up beside the property bar at the top.

The Properties Docker by default is set to Auto Apply all changes. If you input an outline thickness on the porperty bar to obtain more decimal places, then Open the Properties Docker and switch to the outline tab, it will first round off the values to one decimal place and apply this new value to your selected object(s). To prevent this, Open the Properties Docker, switch to the outline tab, and click on the Lock button to disable the auto-apply. The Docker will still report one decimal place, but the original value set will still hold.

Product specifications, packaging, technical support and information (*Specifications*) refer to theUnited States retail English version only. Specifications for other versions may vary. All Specifications, claims, features, representations, and/or comparisons provided are correct to the best of our knowledge of the date of publication, but are subject to change without notice.OUR MAXIMUM AGGREGATE LIABILITY TO YOU AND THAT OF OUR DEALERS AND SUPPLIERS IS LIMITED. Top Navigational Bar

Some of the Full color pattern fills do not fill and display properly.

DocumentID: 205852
Revision Date: 5/7/2001 9:58:04 AM

The information in this document applies to:

CorelDRAW ™ 10

Problem

In the Pattern Fill dialogue window, under full color, some of the fills listed here do not preview correctly, and when applied do not fill correctly as they did in previous versions.

Answer:

Click File, Import, switch to the following location.
C:\Program Files\Corel\Graphics 10\Custom\Patterns.

Import the fill in question, for now use the bubble1.pat

Then click Tools, Create, Pattern.
Select Full Color, Click O.k.
With the Crosshair cursor, click and drag directly around the grey rectangle of the pattern. Only selecting the rectangle and a small pie section out of each elipse.
Let go, click o.k, then it will prompt for a save. Overwrite the existing file that was imported.

Where is the Special Fill Docker
DocumentID: 205853
Revision Date: 5/7/2001 10:03:11 AM

The information in this document applies to:
CorelDRAW ™ 10

Problem

Unable to locate the Special fill docker window.
Unable to apply an existing fill to a new object.

Answer:

This docker has been replaced by a feature called "Copy Fill Properties"

Click Tools, customization, select commands.
Choose Fill And Outline for the category at the top.
Scroll down the list of tools, select the "Copy Fill Properties".
Click and drag it into the CorelDRAW workspace and click o.k.
This new toolbar can be placed permanently anywhere in the CorelDRAW workspace.

Create a new object.
Click on the Copy fill properties button.
With the large arrow click on an object you want to copy the fill properties from.

Details:

Cloned text not updating properly.

DocumentID: 205854
Revision Date: 5/7/2001 10:00:42 AM

The information in this document applies to:

CorelDRAW ™ 10

Problem

After creating cloned text.
Any attribute changes made to the control text will be updated on the clone(s).
However, modifying the content of the control text, does not update it's clone(s).

Answer:

After modifying the content of the control text, select it with the pick tool, and click on a black color on the palette, or the same color as the original control text.
The cloned text will now show the changes originally made to the content.

Changing any other attribute of the control text will work as well.(point size, font, color.)

Using the Preset fill Icons for percentages of Black causes CARM.

DocumentID: 205893
Revision Date: 5/7/2001 10:01:09 AM

The information in this document applies to:
CorelDRAW ™ 10

Problem

After adding the custom toolbars for percentage of black fills. Using these toolbars causes The Corel Application Recovery Manager (C.A.R.M.)to appear.

Answer:

Use the default CMYK palette in CorelDRAW 10.
Window, Color palette, place a check beside "Default CMYK palette".

The first eleven colors on this palette range from 100 % black to 100 % white in increments of 10 %.
Or a custom color palette can be created with only these 11 colors on it.

Uninstalling CorelDRAW® 10 from Windows® 95
DocumentID: 206249
Revision Date: 6/20/2001 5:18:43 PM

The information in this document applies to:
CorelDRAW ™ 10

Problem

Warning: Before manually uninstalling any application from Windows® 95, it is strongly recommended to back up the SYSTEM.DAT and USER.DAT files. In addition you should make backups of the WIN.INI and SYSTEM.INI files to a floppy disk. These files can be found in the WINDOWS 95 folder.

CorelDRAW® 10 is not compatible with or supported on Windows 95. To uninstall CorelDRAW 10 from the system, it must be done manually. The following sections will provide the necessary instructions to uninstall CorelDRAW 10:

Answer:

Note: Before attempting a manual uninstall of CorelDRAW, from a system running Windows 95, the following precautions are strongly recommended:

* Create a Startup Disk to allow recovery of basic computer functions in the event of a complete computer failure. The Startup Disk may be created during the Windows 95 installation process or by clicking Start, Settings, Control Panel. Double-click on the Add/Remove Programs icon, and click Startup Disk, Create.

* Copy the SYSTEM.DAT and the USER.DAT to a folder on the Startup disk, or to an additional disk if there is not enough space. Both files are located in the root of the WINDOWS folder and can be used to restore the Windows 95 registry if damaged.

* Move or backup any files that you have created using CorelDRAW.

Removing Files

1. Click Start, Programs, Windows Explorer.
2. Double-click the drive letter that CorelDRAW was installed to (i.e. C:\).
3. Double-click the COREL folder and delete the folder where CorelDRAW is installed.
Note: Folder names may vary, if destination names were modified by the user during installation.

Removing Registry Entries

1. Click Start, Run.
2. Type REGEDIT on the Open command line and click OK.
3. Double-click on HKEY_CURRENT_USER to open the file. Do the same for Software.
4. Open up the Corel section and delete the following:
Corel PHOTO-PAINT
Corel R.A.V.E.
Corel Texture (Version 3.0)
CorelDRAW

Texture Batcher (Version 3.0)
5. Close HKEY_CURRENT_USER, double-click on HKEY_LOCAL_MACHINE to open it and double-click on Software. Double-click on the Corel Section.
6. Open the files listed below and delete any references to CorelDRAW 10. There may be a section entitled "10". Delete that section only.
Corel R.A.V.E.
CorelDRAW
MasterComponentList
CorelSEARCH
Media
Component Apps

Removing Taskbar Entries

1. Click Start, Settings, Taskbar.
2. Click Start Menu Programs and click Remove.
3. Click the version of CorelDRAW being removed and click Remove.

Details:

Product specifications, packaging, technical support and information (*Specifications*) refer to theUnited States retail English version only. Specifications for other versions may vary. Installation Instructions and FAQs
DocumentID: 206250
Revision Date: 6/26/2001 5:42:25 PM

The information in this document applies to:
CorelDRAW ™ 10

Problem

The following document is divided into four sections:

* Installing CorelDRAW® 10
* Uninstalling CorelDRAW 10
* Guidelines for a clean installation
* Installation Frequently Asked Questions

Note: Before proceeding, ensure that the computer meets all hardware requirements and is running Windows®98, Windows®ME, Windows NT®4.0 or Windows®2000. CorelDRAW 10 is not designed for, and will not run on, earlier versions of Windows or Windows NT.

Answer:

The steps in this document should be followed if any difficulties are encountered during or immediately after the installation of CorelDRAW 10.

Note: It is important to read through this entire document before proceeding.

Installing CorelDRAW® 10

1. Ensure that all other applications, Terminate & Stay Resident programs(TSRs) and screen savers have been disabled. For information about disabling these applications, refer to the Clean Installation section of this document. The setup routine will automatically disable any of the standard Microsoft Screen Savers automatically.

2. Insert CD-ROM#1. If the Auto Insert Notification is enabled, the Setup splash screen should appear. Click on the Install CorelDRAW10, Install Corel PHOTO-PAINT®10, Install CorelR.A.V.E.™10 option. If the Setup splash screen does not appear, click Start, Run and type X:\SETUP32.EXE (where X represents the CD-ROM drive letter) on the Open command line. Click OK.

3. After initializing, the "Welcome to CorelDRAW 10 setup" screen appears. Click next.

4. The CorelDRAW 10 License Agreement is displayed. Read the agreement carefully and click Accept or Decline.

5. The "Personalize CorelDRAW 10" screen appears. Enter your name and company name and click next.

6. CorelDRAW 10 Serial Number. Enter the product serial number in the space provided. The serial number is located on a black "Product Authenticity Card" included with the software. Click Next to continue. Please note, you must enter the registration number into the space provided, or CorelDRAW will NOT install.

7. On the "CorelDRAW 10 Setup Options" screen, click Typical, Compact or Custom.

8. Click Next to continue, and follow the instructions below for the selected installation option:

For the Compact and Typical Installation options:

o Destination Folder - Select the destination folders for CorelDRAW 10 and click Next.
o Shortcut Folder - Select the Shortcut folder or leave as default. Click Next.
o Ready To Install - You are now ready to install. Click Install and follow the "Installation Continued" steps listed below.

For The Custom Installation:
+ Components - Select the applications and filters that you wish to install. Clicking the + preceding each selection will expand the group to display the components within each group. Click Next to continue.
+ Writing Tools - Select the Spell Checker, Thesaurus and Grammatik languages that you wish to install. Click Next to continue.
+ Color Profile - Select an optional color profile for the Monitor, Input device (i.e.: Scanner, Digital Camera) and Printer. Click Next to continue. Note: It is not necessary to install color profiles at this time. They can be installed later, through the Corel Color Profile Wizard.
+ Fonts - Select the desired fonts and click Next. Note: It is strongly recommended that all of the fonts supplied are not installed. This will cause slow performance and irregular system operation. It is recommended that the number of fonts installed on the computer not exceed 450.
+ Destination Folder - Select the destination folders for CorelDRAW 10 and True Type fonts and click Next. Note: It is recommended that the Fonts be installed to the default folder.
+ Temp Folder Selection - These are folders that will be used when temporary disk space is required. It is recommended to assign local hard drives only. Click Next.
+ Shortcut Folder - Select the Shortcut folder or leave as default. Click Next.
+ Ready To Install - You are now ready to install. Click Install, and follow the "Installation Continued" steps listed below.

9. Installation Complete! Click OK. If you are prompted to Restart Windows, click Yes. Installation times will vary depending on the system configuration and installation options selected.

Uninstalling CorelDRAW® 10

1. Click Start, Programs, CorelDRAW 10, Setup and Notes, Corel Uninstaller 10.
2. "Welcome to the Corel Uninstaller" appears. Click Next.
3. "Select products to remove" appears. Enable the check boxes next to the corresponding program or components that you wish to uninstall. If needed, click the + in front of the group to expand the selections.
4. Click Next.
5. "Ready to remove products" appears. Verify that selections and click Next.
6. "Ready to remove products" appears. Click OK to begin uninstalling.
7. Click Finish when prompted.
8. Click Yes if prompted to reboot the system.
Note: If, for any reason, the Uninstaller fails to complete, you must perform a manual uninstall. For more information about manually uninstalling CorelDRAW 10, refer to Fax on Demand document #3950 Uninstalling from Windows 95. This document applies to other versions of Windows.

Guidelines for a Clean Installation

If you are receiving errors or experiencing system instability during the installation of CorelDRAW 10, perform the following steps to reduce potential conflicts during the installation. It is important to follow all suggestions before reinstalling CorelDRAW 10. These instructions pertain to Windows 98 and Windows ME only.

Note: Before proceeding, ensure that you have a recent Windows 98 or Windows ME Startup Diskette. If

you require information for creating one, consult the Windows 98 or Windows ME user manual.
1. Run MSCONFIG.
+ Click Start, Run.
+ Where it says ‘Open', type in msconfig.
+ In the msconfig dialog box, enable selective startup and deselect "Load Startup Group items."
+ Click the Advanced button.
+ In the Advanced settings, place a checkmark beside "Enable VGA 640 x 480 x 16".
+ Click OK twice.
+ When prompted to Restart the computer, click Yes.
2. Close down all programs and Terminate & Stay Resident (TSRs) programs
+ After your system has rebooted, press CTRL, ALT, DEL. This brings up the Close Program dialog box.
+ Select each program in the list one at a time and click End Task . You will need to press CTRL, ALT, DEL to bring the Close Program dialog box up after each program is closed.
Note: Do not end task on Explorer or Systray.
+ After all TSRs have been closed, press CTRL, ALT, DEL to verify that the only item in the list is Explorer or Systray. Click Cancel to close the Close Program dialog box.
You are now ready to install. Follow the directions at the beginning of this document to install CorelDRAW 10. After the installation is complete, reverse the above steps to return the computer to its original configuration. TSRs will automatically reload when the system is restarted.

Installation Frequently Asked Questions

Q. During the installation, a series of errors are generated stating "A required source file was not found" What does this mean?
A. This error may occur when one or more drives are running in MS-DOS Compatibility Mode. To verify this, click Start, Settings, Control Panel and double-click the System icon. Click the Performance tab. If any drives are running in this mode, contact your hardware vendor for assistance in resolving this issue. When a CD-ROM drive is running in MS-DOS Compatibility Mode, it is usually using 16-bit drivers. Update these drivers to 32-bit before proceeding. If there is no indication of MS-DOS Compatibility mode, follow the instructions for a Clean Installation found earlier in this document.

Q. How can I start the setup routing if the splash screen doesn't appear when I insert CD-ROM #1?
A. Click Start, Run. Type X:\SETUP32 (where X is the CD-ROM drive letter) and click OK.

Q. How can I avoid getting an Invalid Page Fault (IPF) when attempting to install the application?
A. To resolve this, follow the instructions for a clean installation found earlier in this document.

Q. I can't find my registration card. How can I find my serial number?
A. Look through all of the documentation that came with the package carefully. There should be a black "Product Authenticity Card" included with the software. The serial number is printed on this card. Contact Customer Service at 1-800-772-6735 if this number cannot be located.

Q. After installing CorelDRAW10 my system fonts or fonts in other programs are messed up. I did a full installation with everything selected. How can I fix this?
A. If you installed all of the fonts that are included with CorelDRAW10 or the total font count on the system is over 500, refer to Fax On Demand document #2102.

Q. How can I correct errors reading the CD-ROM when installing CorelDRAW 10?
A. Ensure that you are using 32-bit Windows drivers for your CD-ROM. Inspect the underside of the CD-ROM for fingerprints, dust or scratches. If you find any dust or fingerprints, clean the CD-ROM with a CD-ROM cleaning kit or wipe the CD-ROM with a soft, lint-free cloth from the center hub to the outer edge of the CD-ROM. Do not wipe in a circular motion.

Q. How do I perform a Network installation?
A. A Network Installation requires additional licenses for the workstations that you will be installing the package to. Contact your local Corel Approved Reseller to purchase additional licenses.

Q. Do I have to install CorelDRAW 10 over my previous version of CorelDRAW?
A. No, do not install CorelDRAW 10 over any previous version of CorelDRAW. Ensure that you install it to an entirely different folder to ensure a successful installation.

Q. When I installed CorelDRAW 10, CD-ROM #1 was the only CD-ROM required. How do I install CD-ROM #2 and 3?
A. CD-ROM #2 and 3 do not install. They contain clipart, photos, sample files, brushes, etc, and are used in conjunction with the application modules.

Q. I just installed CorelDRAW 10 on a computer running Windows 95, and I am now getting Invalid Page Faults and Procedure Entry Point errors opening my programs. How can I resolve this?
A. CorelDRAW 10 was designed and tested to run on either Windows 98, Windows ME Windows NT 4.0 or Windows 2000. No other operating systems are currently supported. To uninstall CorelDRAW 10 from Windows 95, please refer to Fax on Demand Document #3950 - Uninstalling CorelDRAW® 10 from Windows 95.

Attune™ FAQs
DocumentID: 206252
Revision Date: 6/26/2001 5:43:06 PM

The information in this document applies to:
CorelDRAW ™ 10

Problem

Answer:

What is Attune™?

Attune is a revolutionary service that provides you with targeted Intelligram messages to help you avoid common computer problems. Attune may also let you know when you need a specific product, service or upgrade to optimize the use of your computer.

What are the benefits?

*Attune can notify you of computer problems before they occur.
*You will only be notified when there is an issue that is specifically relevant to your computer.
*Attune continually keeps its information up-to-date. Tips, patches and bug fixes are provided proactively.
*Your privacy is absolutely protected.

How does Attune work?

Attune runs quietly in the background and automatically updates its Intelligrams when you are connected to the Internet. If you are about to encounter a situation on your computer that is known to cause problems, Attune presents you with the solution to the situation through an Intelligram.

Intelligrams are "Intelligent Telegrams," with the addition of a logic rule that determines if the Intelligram is relevant for you and exactly when you should be notified about it. An Intelligram might contain workaround steps to a problem, directions for downloading a software patch or a simple executable file for you to run.

Details:

Installing True Type Fonts
DocumentID: 206253
Revision Date: 6/20/2001 5:24:30 PM

The information in this document applies to:
CorelDRAW ™ 10

Problem

The True Type font engine is an integral component of Windows® 98/2000. Therefore, a third-party font manager is not required to use True Type fonts in any application running in Windows 98/2000 environments. True Type fonts are installed to and accessed from the WINDOWS/FONTS folder in Windows 98/2000. CorelDRAW® 10 applications will access True Type fonts from this location.

Answer:

Note: Installing an excessive number of Fonts (+500) may tax system resources, hinder performance and affect the operation of Windows®.

There are two options for installing True Type Fonts in Windows 98/2000 or Windows NT®. Fonts may be installed using the Fonts icon within the Control Panel or through the Bitstream Font Navigator.

Installing True Type Fonts to Windows® 98/2000 or Windows NT®:

1. Click Start, Settings, Control Panel and double-click the Fonts icon.
2. Click File, Install New Font.
3. Insert the CorelDRAW CD-ROM #1.
4. Click the CD-ROM drive from the Drives list box and double-click the folder that contains the desired fonts (i.e. X:\FONTS).
5. Click the fonts to be installed and click OK.

Installing Extra Fonts:

1. Click Start, Settings, Control Panel and double-click the Fonts icon.
2. Click File, Install New Font.
3. Insert the CorelDRAW 10 CD-ROM #2.
4. Double click extra fonts. Double-click the ttf or multiling folder.
5. Click the fonts to be installed and click OK.

Installing True Type Fonts from the Bitstream Font Navigator
1. Click Start, Programs, CorelDRAW10, Productivity Tools, Bitstream Font Navigator.
2. If this is the first time opening it will ask to catalog your system.
3. Once it has finished cataloging there will be two columns of fonts. One is the catalog contents(not installed) and the other is the installed fonts. To install a font from the catalog, right click the desired font and choose install.

Details:

Product specifications, packaging, technical support and information (*Specifications*) refer to theUnited States retail English version only. Specifications for other versions may vary. All Specifications, claims, features, representations, and/or comparisons provided are correct to the best of our knowledge of the date of publication, but are subject to change without notice.OUR MAXIMUM AGGREGATE LIABILITY TO YOU AND THAT OF OUR DEALERS AND SUPPLIERS IS LIMITED. Using Multilingual Fonts
DocumentID: 206254
Revision Date: 6/21/2001 1:30:31 PM

The information in this document applies to:
CorelDRAW ™ 10

Problem

The CorelDRAW® 10 setup only contains a default set of fonts. Extra fonts are provided on the CD. Both True Type and Type 1 are provided on CD#1 in the Fonts folder and on CD#2 in the Extra Fonts folder.

Answer:

Installing Multilingual Bitstream Fonts

There are additional Bitstream multilingual fonts provided with CorelDRAW 10. For the multilingual Bitstream fonts to be read correctly, they must be installed using the accompanying .inf file (Corel_bt.inf), located in the same folder as the fonts. The fonts are located on CD#2 in the \Extra Fonts\Multling folder.

To Install Multilingual Bitstream Fonts:

1. Launch Windows Explorer.
2. Insert CD-ROM #2.
3. Locate the\Extra Fonts\Multiling folder.
4. Select the file Corel_bt.inf. Right-click the selected file and choose Install.

Note: After installing these fonts, you must restart Windows® and initialize the Fonts folder. Close all applications and restart Windows. After Windows launches, go to the Start Menu, choose Settings, Control panel and double-click the Fonts icon. This will open and initialize the fonts folder.

For additional information on creating multilingual documents, please refer to Windows on-line help (Topics: Multilanguage Support, Installing and Multilingual Documents, Creating).

Double Byte and Bi-Directional fonts are not supported when using Bitstream TrueDoc™ to embed fonts within a document.

On Microsoft Windows 2000, changing the default Writing Tools language in CorelDRAW 10 will cause the matching keyboard language to appear in the taskbar even if this input language is not installed by the user. This results from the operating system making all required .KBD files available when multi-language support is installed.

When installing different language keyboards on Windows NT® or Windows 2000, you must change both the input locale and the keyboard layout to an appropriate language for CorelDRAW in order to apply the correct text formatting.

CorelDRAW 10 uses a new method to enumerate multilingual fonts. However, because this differs from the font enumeration method used in earlier versions, the following limitations will occur:

*When saving a CorelDRAW document as Version 9 or earlier, the font codepage information will not be maintained.

*When opening earlier version files that contained multilingual fonts (for example, Arial CYR), the Panose dialog will be invoked even if the font is installed on the system. The user needs to make the appropriate font substitution (to the appropriate typeface and codepage) and save the changes to the exceptions file once. When you are finished, save the file to a Version 10 format. You will not have to do this again.

*When opening earlier version files, the user must select each text object and set the appropriate language for those objects using the Language dialog. This way, the correct Writing Tools language (for spell checking and hyphenation) can be applied to the various text objects in the document. Also, the user can re-apply a multilingual font, so the appropriate character set will be displayed.

*When opening a file you have created in earlier versions of CorelDRAW, the characters might become unreadable or you might not be able to change the font. In CorelDRAW 10, the fonts are only intended to be applied to languages in which the font will work. If you select text that is unreadable or if you need to change the font, do the following:

1. Click Text, Writing Tools, Language.
2. Select the language of the current text. The characters should then be correct and allow you to change the font.

Creating Transparent Bitmaps
DocumentID: 206259
Revision Date: 7/9/2001 4:22:03 PM

The information in this document applies to:
CorelDRAW ™ 10

Problem

Answer:

Transparent Bitmaps

When a bitmap image is used in desktop publishing applications, it is usually in the shape of a rectangle. This does not have to be the case when using Corel applications, because there are several different ways of making the background pixels of the image transparent, so the graphics laying behind the image will show through the bitmap. Eliminating a color can also alter the apparent shape of the bitmap. For example, if the Bitmap Color Mask is applied to the black background of a bitmap containing red text, the bitmap appears to take on the shape of the text only. The bitmap retains its original rectangular shape, but it will print and display without the black background. This document will outline several methods for creating transparent backgrounds on bitmaps.

Graphics Interchange Format (GIF) in Corel PHOTO-PAINT® 10 and CorelDRAW® 10

A bitmap image can be saved as a GIF file with a transparent background. When saving the file as a CompuServe GIF, be sure the Image has been converted to 256 colors.

The following method could be used to turn a CorelDRAW® 10 or Corel PHOTO-PAINT® 10 graphic into a bitmap image (CompuServe GIF) with a transparent background:

In Corel PHOTO-PAINT® 10:

1. Open the bitmap image.
2. Click File, Save As.
3. Select GIF – CompuServe Bitmap format from the Files Of Type list box and click the Save button.
4. In the GIF Export dialog box, enable the Image Color box. Select the Eye Dropper tool and click the desired color in the Original window. Click OK. Clicking the Preview button will display the result in the Result window.

In Corel PHOTO-PAINT 10 there is also an option to select Masked Area. If the image contains a mask, select this option and everything outside the mask will be designated as transparent. Note that the "Transparent Color" can also be changed by clicking on the Color Table button. When the image is imported into an application that does not support GIF transparencies, this will be the background color that is displayed.

In CorelDRAW® 10:

1. Import the bitmap image into an existing document.
2. Click File, Export.
3. Select the CompuServe Bitmap (GIF)format from the Save As Type list box and click Export.

4. In the Bitmap Export dialog box, select the desired bitmap settings. Internet graphics in the GIF format are usually Paletted (8-bit) with a resolution of 72 dpi. Click the OK button.
5. In the GIF Export dialog box, enable the Image Color box. Select the Eye Dropper tool and click on the desired color in the Original preview window. Click OK.

Note: The Masked Area option is not available when exporting to the GIF file format from CorelDRAW 10.

Removing Bitmap Backgrounds Using the *.CPT filter:

Note: This method works best with images that contain backgrounds of a single color.

1. Open the image in Corel PHOTO-PAINT10.
2. Click on the Mask Tool with the left mouse button and hold. From the Mask flyout, select the Magic Wand Mask Tool.
3. Using the Magic Wand Mask Tool, click on the color background on the open image.
4. Click on the Mask menu. Select Invert.
5. Click on the Edit menu. Select Copy.
6. Click on the Edit menu, select Paste, New From Clipboard, or, click on File, New From Clipboard.
7. Save the file as a Corel PHOTO-PAINT Image (CPT).
8. Import the file into CorelDRAW 10.

Removing Bitmap Backgrounds Using Clipping Paths/Masks:

EPS Method:

Note: This method does not support CMYK 32-bit color bitmaps.

1. Open the image in Corel PHOTO-PAINT 10.
2. Using the Mask Tool, create a Mask around the desired area. Note: If using a Clipping Path, it is not necessary to create a Mask.
3. Click File, Save As. Save the file as EPS – Encapsulated PostScript.
4. In the EPS Export Options, enable the Include Thumbnail, Clip to Mask and Discard Image Data Outside Clipping Region.
5. Click OK.
6. Run CorelDRAW 10
7. Import the *.EPS file using the Adobe® PostScript® Interpreted filter(*.PS).

Note: If the EPS file is imported as Encapsulated Postscript, the background will not be transparent on the display. This is only the header of the EPS file. The background will print as transparent when output to a Postscript device.

Mask Method:

1. Open the image in Corel PHOTO-PAINT 10.
2. Using the Mask Tool, create a Mask around the desired area.
3. Click File, Save As. Save the file to any one of the following popular file formats: CPT – Corel PHOTO-PAINT, TIF – TIF Bitmap.
4. When importing this file into CorelDRAW 10, the unmasked area of the image will be transparent.

Removing Bitmap Backgrounds Using the Shape Tool:

Bitmaps that are imported into CorelDRAW 10 can have their rectangular backgrounds cropped by editing their shape using the Shape tool.

1. Import the bitmap into CorelDRAW 10
2. Click the bitmap with the Pick tool and click the Shape tool. Nodes will appear around the bitmap.
3. Click and drag a node with the Shape tool. This will bend and crop the image.

4. To increase the number of nodes around the bitmap, click the desired spot and press the + button found on the property bar.
5. The newly created node(s) can be moved with the Shape tool to crop the unwanted background.

Note: This bitmap will retain a rectangular shape if exported in bitmap format. To keep this effect, save the file as a CDR, CMX or an EPS file. To import the EPS file into CorelDRAW, you must use the Postscript Interpreted (PS) filter, instead of the EPS filter.

Transparent Bitmaps Using the "Convert To" Option

Graphics that are created in CorelDRAW 10 can easily be converted to bitmaps.

1. Click the Graphic using the Pick tool.
2. Click Bitmap Menu, Convert To Bitmap.
3. This dialog box gives you the option to set the colors, resolution, dithering and anti-aliasing as well as make the background transparent.
4. Enable the Transparent background check box.

Note: This transparency feature will only make a white background transparent. It does not give the option to make another color transparent and it cannot make the background of an existing bitmap transparent.

File Backup Options

DocumentID: 206261
Revision Date: 6/21/2001 2:04:52 PM

The information in this document applies to:
CorelDRAW ™ 10

There are two methods for creating backup files in CorelDRAW® 10. Both options, Make Backup on Save and Auto backup may be accessed by clicking Tools, Options, Work Space, Save. These options can be invoked individually or concurrently.

Make Backup On Save
A backup file is created when a document is saved more than once during a work session. All backup files are given a file name beginning with BACKUP_OF_ and the file name. For example, the backup of SAMPLE.CDR will be named BACKUP_OF_SAMPLE.CDR. This backup file remains on the hard drive until manually deleted.

To enable the Backup on Save feature:

1. Click Tools, Options, Work Space, Save.
2. Enable the Make Backup on Save check box.

Note: You can have the backup files saved in the same folder as the original file. This cannot be changed.

The original file can be restored by opening the backup file. After opening a backup file, it is recommended that the file be saved under a new file name.

Auto Backup
This option backs up a file at scheduled intervals, preset by the CorelDRAW user. The automatic timer is activated the instant document contents change, and a file is generated with the file name AUTOBACKUP_OF_. Auto back up files are removed from the hard drive when CorelDRAW is closed or when the document is saved.

The auto backup file remains on the hard drive if the application is closed down abnormally. If this occurs, try the following steps:

1. Close all applications and restart the computer.
2. Using Windows Explorer, locate the folder where the auto backup file is located. By default, this will be the same folder where the original file was saved.
3. Click the file and click File, Rename.
4. Type a new file name for this file.
5. Launch CorelDRAW and open the file.

To enable the Auto Backup feature, perform the following steps:

1. Click Tools, Options, Work Space, Save.
2. Enable the Auto Backup check box.
3. Enter an interval time in the number list box (from 1 to 120 minutes).
4. By default, the folder in which the original file is saved is used for the auto backup file. This can be changed by enabling the Always Backup check box and selecting another folder.

Note: It is possible to disable both backup features, but it is not recommended.

Product specifications, packaging, technical support and information (*Specifications*) refer to theUnited States retail English version only. Specifications for other versions may vary. Changing Default Settings
DocumentID: 206264
Revision Date: 6/21/2001 3:55:44 PM

The information in this document applies to:
CorelDRAW ™ 10

Problem

Answer:

Establishing Default Style settings for Artistic text, Paragraph text, Bullets and Graphics:

1. Launch CorelDRAW® 10.
2. Click Tools, Graphic & Text Styles.
3. Click the desired default object type from the list (i.e. Default Graphic) and right-click.
4. Click Properties.
5. From the various options styles, set the default attributes for the object, text or bullet.
6. Click on the Document menu, ensure that there is a checkmark on the Styles option, and click OK.

To set defaults for technique preferences, make the desired changes and click Tools, Options, Documents. CorelDRAW will apply these settings to the current document, as well as the default settings for new CorelDRAW documents.

The new default document uses the following settings from the current document:

* General options
* Page options
* Guideline options
* Grid and Ruler options
* Styles
* Save options
* Publish to the Web options

The changes will be saved as defaults for all future CorelDRAW 10 work sessions.

In CorelDRAW 10, many customizations can be made with the menus, toolbars, toolboxes and status bars. You have the ability to drag-and-drop menu items from the menu to a property bar or to another menu by holding down the ALT key.

There is an easy way to reverse customizations, should you decide to return to the default settings. Press F8 on your keyboard and launch CorelDRAW 10 simultaneously. A message dialogue box will come up saying "Are you sure you want to overwrite the current workspace with the factory default?" Select "Yes".

Note: When you set you application back to the default settings, you will lose all customizations.

To set individual menus, toolbars, toolboxes and status bars back to default settings:

1. Select Tools.
2. Choose Customization.

3. Click on the Command Bars.
4. Highlight the Command Bar to be set back to default.
5. Click Reset.
6. A dialogue box will display "Reset MenuBar to default application settings?"
7. Select Yes.
8. Click OK.

Details:

Product specifications, packaging, technical support and information (*Specifications*) refer to theUnited States retail English version only. Specifications for other versions may vary. Corel PHOTO-PAINT® 10 FAQs

DocumentID: 206265
Revision Date: 6/21/2001 4:00:30 PM

The information in this document applies to:

CorelDRAW ™ 10

The following document contains answers to frequently asked questions about Corel PHOTO-PAINT® 10.

Q. Where are the Plugins located? Why don't they appear on the Effects menu?
A. To install the Plugins:
1. Click Tools, Options, Workspace, Plug-Ins.
2. Click Add.
3. Browse to the C:\PROGRAMFILES\COREL\GRAPHICS10\PLUGINS folder. Double-click the first Plugins folder. Repeat this process for all remaining plugin folders.
4. Enable the Initialize filters at start-up.

Q. Can the Undo level be changed to a higher number?
A. By default, the Undo level is set to 10. To change this setting, click Tools, Options, Memory and enable the Enable Undo check box. The maximum number of Undo levels is 99. Note: The more undo levels used, the more swap disk space Corel PHOTO-PAINT 10 requires.

Q. Why can't I color a part of my image using the Fill tool? Why does it always color the entire image?
A. Click the Fill tool. On the Property Bar, select the HSB Color Tolerance Mode. The value by default is 10. With the color tolerance value lower, you will be able to color specific parts of your image.

Q. Why does it take so long to open a Photo image from CD-ROM #3?
A. The Photo images on CD-ROM #3 are compressed using the Wavelet Compressed Bitmap (WI) format. The actual uncompressed file size of these bitmaps can be anywhere between 3 and 6MB in size.

Q. Why isn't the CompuServe Bitmap *.GIF filter type available in the Save Image As Type list box?
A. The CompuServe Bitmap *.GIF format requires the image to be 256 colors or Paletted (8-bit). Click Image, Mode and click Paletted (8-bit) to enable the *.GIF format.

Q. How can I create an animated GIF?
A. Click File, New. In the Create a New Image dialog box, click 8-bit Paletted as the color mode and 96 DPI as the resolution. Enable the Create A Movie check box and click the number of frames required. Click OK. Create the animation and save the file as a GIF Animation.

Q. Why are most of the Effect options grayed and unavailable?
A. Most of the Effects listed in the Effects menu require a RGB color(24-bit)image. From the Image menu, click Mode and click the RGB Color(24-bit)option.

Q. What are masks and how do I use them?
A. Masks allow the user to click an area of the image to protect or isolate it from effects applied to the image. Masks can be inverted, edited and saved using various commands in the Mask menu. To learn more about the many aspects of masking, consult the Corel PHOTO-PAINT 10 user manual, page 49.

Q. When opening a Kodak Photo CD Image, I cannot click OK or NEXT in the Image Enhancement section.
A. There are two possible workarounds if this occurs:
1. Click Start, Settings, Taskbar. Enable the Auto hide check box and click OK. This will allow the Taskbar to drop below the bottom of the display when not in use, therefore allowing the OK button to be displayed.

By moving your cursor all the way to the bottom of the screen, the Taskbar will pop up again, or:
2. Click Start, Settings, Control Panel. Double-click the Display icon and click Settings. Change the Desktop Area to a higher setting than 640x480. If you have any difficulties changing the screen resolution.

Q. How can I get my images from Corel PHOTO-PAINT to the World Wide Web with a transparent background?
A. A bitmap image can be saved as a .GIF file with a transparent background. When saving the file, be sure the image has been converted to 256 colors and saved as CompuServe GIF.

In Corel PHOTO-PAINT 10:
1. Open or Import the bitmap image.
2. Click File, Export.
3. Click CompuServe GIF format from the Files of Type list box and type a file name.
4. Click Save.
5. Select Image Color, click on the EyeDropper Tool and click the area in the Original GIF Export dialogue box that you want transparent.
6. Click OK.
7. Import or Open in DRAW to view the resulting image.

Q. Where is the .MPG export file format in PHOTO-PAINT 10?
A. The file format .MPG has been omitted from PHOTO-PAINT 10.

Q. Where are the MOV and QTVR filters in PHOTO-PAINT 10?
A. You must install Apple® QuickTime® 3.0.2 or greater. An installer for QuickTime 4.1.2 is included on the CD. It is accessible through the Intro.exe executable at the root of the CD #1.

Product specifications, packaging, technical support and information (*Specifications*) refer to theUnited States retail English version only. Specifications for other versions may vary. All Specifications, claims, features, representations, and/or comparisons provided are correct to the best of our knowledge of the date of publication, but are subject to change without notice.OUR MAXIMUM AGGREGATE LIABILITY TO YOU AND THAT OF OUR DEALERS AND SUPPLIERS IS LIMITED. Printing FAQs
DocumentID: 206266
Revision Date: 6/21/2001 4:04:58 PM

The information in this document applies to:
CorelDRAW ™ 10

Problem

The following document contains frequently asked questions about printing and CorelDRAW® 10.

Answer:

General Printing

Q. Why don't the colors print the same as they look on the screen?
A. Typically, this is due to an incorrect or invalid color profile activated in the Corel Color Manager 10. Generic profiles are active by default and may not produce optimal output for your computer. Try disabling the Apply ICC Profile check box, found on the Miscellaneous tab of the Print dialogue box. It is also important to note that many printer drivers have their own internal color management software that may be active. This should be disabled if using a Corel color profile.

Additionally, this color output issue may be a result of insufficient ink/toner or another physical problem with the output device. Try printing a test page from another application or from the driver to eliminate this as a cause.

Q. Why don't some bitmaps or fills print when placed over other objects?
A. This occurs because of a printer setting on some printers. To resolve this, click Start, Settings, Printers. Click the printer icon and click File, Properties. Click the Graphics tab and click Use Raster Graphics.

Q. How can I control the banding on my printed fountain fills?
A. It is possible to specify the number of steps in the fountain fills in your print job. A low number of steps prints faster, but the transition between shades may be rather coarse, causing what is known as banding. A higher value results in a smoother blend, but the printing time is longer. To change this setting, click File, Print and click the Miscellaneous tab. Type the number of steps to be used when rendering fountain fills in the Fountain Steps list box. You can preview how the fountain fill will appear by opening the pre-flight preview and adjusting the fountain steps.

Q. When I import an EPS file into CorelDRAW and print to a printer other than an Adobe® PostScript® printer, the output appears pixilated and unclear. Why?
A. An EPS file is a Postscript (PS) file and is meant to be printed to a PostScript printer. When printed to a non-PostScript printer, it will only print the file header which is a low resolution preview of the actual file. If you wish to print the actual contents of the EPS file to a non-PostScript printer, import the file it into CorelDRAW using the PostScript Interpreted (PS, PRN, EPS) filter.

Q. Why do I get printer Spool file errors when I print?
A. This error is commonly caused by the WINDOWS\SPOOL folder becoming too full or unable to accept new data. If this occurs, ensure that the WINDOWS\SPOOL folder is purged of old print jobs. The spooler can also be disabled in the Printer Driver properties. For most printer drivers, click Start, Settings, Printers.

Click the printer icon and click File, Properties. Click Details, Spool Settings. Enable the Print Directly To Printer check box.

Q. Why do bitmaps sometimes drop from my printed output?
A. This may happen when the print job is complex. To resolve this problem, try one of the following fixes:

1. Click File, Print Preview, Settings, Driver Compatibility and enable Output bitmaps in 64K Chunks, or:
2. Click File, Print Preview, Settings, Driver Compatibility and enable Send Bands to Driver.

Q. Why can't I import or print Duotone files that contain spot colors from CorelDRAW 10?
A. Duotones are 8-bit color images that use 256 shades of up to four tones. To import Duotones into CorelDRAW 10, there are two options. You can save the image in Corel PHOTO-PAINT® 10 as an EPS file and import it into CorelDRAW 10 using the Encapsulated Postscript (EPS) file type. It is important that the correct filter type be chosen. The separated output, assuming it is being sent to a capable PostScript device, will contain the corresponding spot color information, despite having a grayscale representation on the screen. The second method involves importing the bitmap into CorelDRAW and converting it to Duotone. Be sure to assign the Pantone colors in the Duotone dialogue box.

Q. Why is my printer generating a Print Overrun error message?
A. This message sometimes occurs with non-PostScript HP LaserJet printers. To resolve this, click Start, Settings, Printers. Click the printer icon and click File, Properties. Click the Graphics tab and enable Use Raster Graphics.

Q. My Printer is printing slowly and I sometimes receive the error message "Windows could not write to the printer spool file". How can I resolve this issue?
A. There are 3 possible solutions:

1. Click File, Print Preview, Settings, Driver Compatibility and enable Send Bands to Driver.
2. Click File, Print Preview, Settings, Driver Compatibility and enable Output bitmaps in 64K Chunks.
3. Click Start, Settings, Printers. Click the printer icon and click File, Properties. Click Details, Spool Settings. Enable the Print Directly To Printer check box.

Q. Why do I receive "Out of Memory" errors or low disk space warnings when I try to print from my Corel application?
A. This condition is directly related to the amount of system resources available at the time the print job is sent. It is essential to have sufficient free disk space on the hard drive where Windows is located for virtual memory, the creation of temp files and the printer spool file. Depending on the size of the file, free space required should be between 50 and 150 MB.

Q. Why do my separations contain CMYK values? I thought my original file only contained Spot colors? Where are these CMYK colors coming from?
A. In many cases, an object may be filled with a Spot color, but the outline may be assigned a CMYK value. Replace the CMYK outlines with the Spot equivalent. Also, ensure that you are not using a CMYK black or white.

Q. My HP printer will not print bitmaps. Instead of the image, a gray or black box is printed.
A. Find the driver initialization file on the hard drive (HP.INI, DESKJET.INI) and open it in Windows Notepad. Look for the line that reads "JumboTechnology=0100." Modify this line to read "JumboTechnology=0000." Save and close the file. Your bitmaps should print normally.

If the bitmaps still do not print correctly, click File, Print, Miscellaneous tab and scroll down the list of Special Settings. Click Print Bitmaps as RGB and click ON.

Q. Why is an IPF error generated when I try to print color separations?
A. Ensure that the date and time are set correctly for your computer. Click Start, Settings, Control Panel. Double-click Date/Time, adjust the date accordingly and click OK.

Q. Two-color pattern fills are not printing correctly on my printer. How can I correct this?
A. Click File, Print, Miscellaneous and scroll down the list of Special Settings. Click Print Bitmaps as RGB and click ON.

Q. Files that used to print correctly on my PostScript printer will no longer print from CorelDRAW 10. How can I correct this?
A. Click File, Print, PostScript and change Compatibility to Level 1. If the file still does not print, try reducing the Maximum Points Per Curve to 300 and enabling Auto Increase Flatness.

Q. Fonts are not printing correctly on my printer. What should I do?
A. For non-PostScript output, click File, Print Preview, Settings, Driver Compatibility and enable All Text As Graphics. For PostScript output, click File, Print, PostScript and disable Download Type 1 Fonts. Alternately, if Artistic Text is being used, it may be converted to curves before printing. Select the text object with the Pick tool and click Arrange, Convert to Curves.
Note: Text that has been converted to curves can no longer be edited as text.

Q. Why is the orientation of the output incorrect when printing to an image setter or other roll-fed devices?
A. Obtain the latest PostScript driver for this device. The latest Adobe® PostScript® driver corrects orientation issues on Level 2 PostScript devices.

Q. When I use CorelDRAW's Drop Shadow effect and place the object on top of a bitmap or colored background, it prints with a halo effect around the drop shadow. How do I stop that from happening?
A. Most color printer drivers have a setting in the properties that controls how the output will print. These settings are usually named Automatic, Photographic, Vivid Color or Presentation. The default is often set to Automatic. Change this setting to one of the other available settings, such as Vivid or Photographic and print the file. If you are using a Color Profile in CorelDRAW, disable the printer color correction in the Printer Properties first. In CorelDRAW, click Tools, Options, Global, Color Management, General and change the Color Matching Mode to Photographic or Illustration.

Accessing Clipart and Symbols
DocumentID: 206267
Revision Date: 6/21/2001 4:07:32 PM

The information in this document applies to:
CorelDRAW ™ 10

Problem

There are over 25,000 clipart images and symbols in CorelDRAW® 10. Importing is the primary method of accessing the clipart in CorelDRAW products for use within a document. This tutorial will outline the steps required to search for and import a specific clipart image from the clipart manual.

Answer:

Importing Clipart
Search for the Clipart image bluegill.cdr

1. Insert the CorelDRAW 10 CD-ROM #2.
2. Click File, Import in the application CorelDRAW 10.
3. In the List Files of Type list box, choose CorelDRAW .CDR.
4. From the Import dialog box, select the appropriate CD drive. Double-click the Clipart folder and the Collection folder.
5. A list of clipart categories will appear in the import window.
6. Double-click on the Fish folder.
7. From the list of files, select bluegill.cdr and click Import.
8. Click on the page location where you want the image to be placed, or hit the space bar to drop the image at the default location.

Accessing Symbols
Symbols are not Opened or Imported into a document. Symbols are installed in the same manner as True Type Fonts, through the Windows® Fonts folder.

Note: The CorelDRAW symbols can be accessed directly from CorelDRAW, provided all of the symbols have been previously installed. If all of the symbols are not available, install them in the same manner you would install True Type fonts.

Installing Symbols on Windows® 98/2000/ME or Windows NT®:

1. Click Start, Settings, Control Panel and double-click the Fonts icon.
2. Click File, Install New Font.
3. Insert the CorelDRAW 10 CD-ROM #2.
4. Click the CD-ROM drive from the Drives list box and double-click the folder that contains the desired symbols (i.e.X:\EXTRAFONTS\SYMBOLS\TTF).
5. Click the symbol to be installed and click OK.

To access a Symbol in CorelDRAW® 10:

1. Click Window, Dockers, Symbols and Special Characters, or click Tools, Symbols and Special

Characters.
2. The Symbols and Special Character Docker will appear. Locate the appropriate category for the desired symbol in the list box.
3. Drag and drop the symbol onto the document.

Templates
Templates are found on CD-ROM #1 in the TEMPLATE folder.

1. Click File, New From Template.
2. Click the Browse tab.
3. Choose the CD-ROM drive.
4. Double-click the Corel folder, Graphics10, DRAW and Template.
5. You now have access to the Booklet, FullPage, Label, Sidefold and Web Template folders.

Photos and Bitmaps
Photos and Bitmaps can be found on CD-ROM #3. Photos are in the PHOTOS folder and the Bitmaps are located under the IMAGES folder. To access them, click File, Import and click Wavelet Compressed Bitmap (WI) for photos and TIFF Bitmaps (TIF) for all other bitmaps in the Files of Type list box. Refer to the Clipart manual to properly associate the desired image to its respective category.

Floating Objects
Floating Objects are found on CD-ROM #3 in the OBJECTS folder. To access them, they must be opened in Corel PHOTO PAINT® or imported into CorelDRAW.

3D Models
3D Models are located on CD-ROM #3. They can be opened in CorelDRAW and in PHOTO-PAINT with the 3DM file filter.

Brush Textures
Brush textures can be used within CorelDRAW and Corel R.A.V.E.™ To add additional brush textures, drag and drop these files to the Draw\CustomMediaStrokes folder where CorelDRAW is installed.

Frames
Frames can be used within CorelDRAW, Corel PHOTO-PAINT®, and Corel R.A.V.E. To add additional frames, drag and drop these files to the Custom\Frames folder where CorelDRAW is installed.

Image Lists
Image Lists can be used within Corel PHOTO-PAINT. To add additional image lists, drag and drop these files to the Photopnt\ImgLists folder where Corel PHOTO-PAINT is installed.

Spray lists
Spray lists can be used in CorelDRAW and Corel R.A.V.E. To add additional spray lists, drag and drop these files to the Draw\CustomMediaStrokes folder where CorelDRAW is installed.

Patterns
Select patterns to use within CorelDRAW, Corel PHOTO-PAINT and Corel R.A.V.E. To additional patterns, drag and drop these files to the Custom\Patterns folder where CorelDRAW is installed.

Sounds
CorelDRAW and Corel R.A.V.E. support sounds through the operating system. You can assign feedback sounds to specific events and you can enable feedback sounds. To assign feedback sounds with CorelDRAW and Corel R.A.V.E.:

1. Click Start on the Windows taskbar.
2. Click Settings, Control Panel.
3. Double-click Sounds.
4. Choose CorelDRAW or Corel R.A.V.E. from the Events list.

5. Click an Event.
6. Choose a sound from the Name list box.

Note: The .wav files chosen to be used in the applications must be copied into the Windows Media Folder.

Tiles
Tiles can be used within CorelDRAW, Corel PHOTO-PAINT and Corel R.A.V.E. To add additional tiles, drag and drop these files to the Custom\Tiles folder where CorelDRAW is installed.

Webart
Raster and vector webart images can be used within CorelDRAW, Corel PHOTO-PAINT and Corel R.A.V.E.

Details:

Product specifications, packaging, technical support and information (*Specifications*) refer to theUnited States retail English version only. Specifications for other versions may vary. Assigning PANTONE MATCHING SYSTEM® Colors to Raster Images

DocumentID: 206268
Revision Date: 6/21/2001 4:12:13 PM

The information in this document applies to:
CorelDRAW ™ 10

Problem

Raster images or bitmaps are generally CMYK or RGB. As a result, PMS (PANTONE MATCHING SYSTEM®) colors are unavailable when printing separations. There are two ways to assign PMS colors to a raster image using CorelDRAW® 10.

Answer:

Converting an Image To Duotone

To convert a bitmap image to a duotone in CorelDRAW 10, import the bitmap (.CPT, .BMP, .TIF, .JPG, or .GIF). Select the bitmap with the pick tool. Click on the Bitmap menu and select Mode, Duotone. To change the color to a Pantone color, double-click the Pantone color to obtain the "Select Color" dialogue menu. Once the color is selected, click OK. Click again to exit the "Duotone" dialogue box.

The image can also be converted to a Monotone, Duotone, Tritone or Quadtone using the duotone dialogue box. Any combined PMS colors create the appearance of another color space.

Using 1-bit Monochrome Images

To convert an image into a 1-bit monochrome bitmap, first import the bitmap into CorelDRAW. Click on the Bitmap menu, Convert to, Black and White (1-bit). Select the desired Conversion Method and click OK. Now that the image is a 1-bit bitmap, select the bitmap with the pick tool. Using the outline tool, select the desired PMS color. Assigning the outline color changes the black pixels in the image and assigning a fill color changes the white or transparent pixels in the image.

To verify that the bitmap is separating on a Pantone plate, click File, Print Preview. Click the Options button, the Separations tab, enable Print Separations and click OK. Each of the separations should now be displayed.

Note: This method will not work if the image is converted to Black and White by selecting Mode, Black and White. You must convert the image using Convert to in order to achieve the desired effect.

Creating a Duotone Image in Corel PHOTO-PAINT®10

Open the bitmap image in Corel PHOTO-PAINT®10. Click on Image, Mode, Duotone (8-bit). Select the Type: Monotone, Duotone, Tritone or Quadtone. Double-click the Pantone color name to open the Select Color dialog. Select the desired Pantone Matching System color and click OK. Click OK again to complete the conversion. Now save the file to the EPS file format. Click on File, Save As, enter a filename, select Encapsulated PostScript® (EPS) from the Save as Type list and click the Save button.

The file is now ready to be imported into CorelDRAW 10 or another application that supports the EPS file

format. Use the Encapsulated PostScript (EPS) filter in CorelDRAW™ 8 to import the file.

DISPLAYING IMAGE AND EFFECTS MENUS

DocumentID: 206269
Revision Date: 6/21/2001 4:19:23 PM

The information in this document applies to:
CorelDRAW ™ 10

Problem

In Windows NT and Windows 2000, selecting the Image or Effects menu will not display the corresponding dialogue boxes when logged in as a member of a group which does not have administrative priviledges.

Answer:

It is very important to make a backup of your Windows registry prior to proceeding with the following instructions. If you are unfamiliar with backing up the registry or registry editing in general, it is strongly recommended that your system administrator make the following changes. The importance of adhering to recommended recovery precautions as listed cannot be overstated. The Corel Corporation assumes no expressed or implied liability for any computer or software damages resulting from the use or misuse of this information.

The Workaround to getting the Image and Effects dialogues to display:

1. Log on as the Administrator (The one who installed the application)
2. Click Start - Run
3. Type regedt32 and select Enter
NOTE: Missing the i in edit for a reason - not a type mistake
4. Select the HKEY_LOCAL_MACHINE window
5. Go to key HKEY_CURRENT_USER\SOFTWARE\COREL\CorelDRAW\10.0
6. With the COREL key highlighted, select SECURITY - PERMISSIONS
7. Now allow the users that are to be running the applications full control (It will only give them access to this key and all of the subkeys)
8. Hit APPLY and then OK

The dialogues will now appear in CorelPHOTO-PAINT for each menu item for each user.

CorelDRAW

In Windows NT and Windows 2000, if not logged in with Administrator privileges the Bitmap Effects dialogue boxes are not accessible.

The Workaround to getting the Bitmap Effects dialogues to display:

1. Log on as the Administrator (The one in which installed the application)
2. Click Start - Run
3. Type regedt32 and select Enter
NOTE: Missing the i in edit for a reason - not a type mistake
4. Select the HKEY_LOCAL_MACHINE window
5. Go to key HKEY_CURRENT_USER\SOFTWARE\COREL\CorelDRAW\10.0

6. When the COREL key is highlighted, select SECURITY - PERMISSIONS
7. Now allow the users that are to be running the applications full control (It will only give them access to this key and all of the subkeys)
8. Hit APPLY and then OK

The dialogs will now appear in CorelDRAW for each menu item for each user.

Digital data exchange (DDE)
DocumentID: 206270
Revision Date: 6/21/2001 4:22:52 PM

The information in this document applies to:
CorelDRAW ™ 10

Problem

The following document will provide the necessary instructions to enable only one instance of the programs CorelDRAW, Corel PHOTO-PAINT, or Corel R.A.V.E. to be opened when double clicking on files from Explorer.

Answer:

CorelDRAW

1. Double click the My Computer icon on the desktop.
2. Click on View –> Folder Options (Windows 98), Tools –> Folder Options (Win ME/2000) or View –> Options (Win NT).
3. Click the File Types tab.
4. Under the Registered File Types dialogue box, select .CDR CorelDRAW10.0 Graphic.
5. Click on the Advanced button.
6. Highlight Open under the Actions section and click Edit.
7. In the Editing for Action dialogue box you will need to add the following information:

Action:Open

Application used to perform Action: "x:\programfiles\corel\graphics10\programs\coreldrw.exe" %1 (where x: is the letter of the drive the program is installed on)

Put a check mark in Use DDE

DDE message:[O("%1")]

Application:coreldrw_MOS

DDE Application Not Running:Leave this field empty.

Topic:System

9. Click OK, then OK, then Close.

Double clicking on a file in Explorer will now open multiple files in one instance of CorelDRAW.

Corel R.A.V.E

1. Double click the My Computer icon on the desktop.
2. Click on View –> Folder Options (Windows 98), Tools –> Folder Options (Win ME/2000) or View –>

Options (Win NT).
3. Click the File Types tab.
4. Under the Registered File Types dialogue box, select .CLK Corel R.A.V.E. 1.0.
5. Click on the Advanced button.
6. Highlight Open under the Actions section and click Edit.
7. In the Editing for Action dialogue box you will need to add the following information:

Action:Open

Application used to perform Action:"x:\ProgramFiles\Corel\Graphics10\Programs\Rave.exe" %1(where x: is the letter of the drive the program is installed on)

Put a check mark in Use DDE
DDE message:[O("%1")]

Application:rave_MOS

DDE Application Not Running:Leave this field empty.

Topic:System

9. Click OK, then OK, then Close.

Double clicking on a file in Explorer will now open multiple files in one instance of Corel R.A.V.E.

Corel PHOTO-PAINT

1. Double click the My Computer icon on the desktop.
2. Click on View –> Folder Options (Windows 98), Tools –> Folder Options (Win ME/2000) or View –> Options (Win NT).
3. Click the File Types tab.
4. Under the Registered File Types dialogue box, select .CPT Corel Photo-Paint 10.0 Image.
5. Click on the Advanced button.
6. Highlight Open under the Actions section and click Edit.
7. In the Editing for Action dialogue box you will need to add the following information:

Action:Open

Application used to perform Action:"x:\ProgramFiles\Corel\Graphics10\Programs\photopnt.exe" /dde (where x: is the letter of the drive the program is installed on)

Put a check mark in Use DDE

DDE message:[O("%1")]

Application:Leave this field empty.

DDE Application Not Running:Leave this field empty.

Topic:Leave this field empty.

9. Click OK, then OK, then Close.

Double clicking on a file in Explorer will now open multiple files in one instance of Corel PHOTO-PAINT.

VBA PERMISSIONS
DocumentID: 206271
Revision Date: 6/21/2001 4:57:29 PM

The information in this document applies to:
CorelDRAW ™ 10

Problem

When the CorelDRAW 10 suite is installed with VBA on WinNT4/Windows 2000 as Administrator or on a multi-user Windows 9X/Windows Millenium platform, VBA will not be initialized for any other user except for the administrator or the user who installed the application.

Answer:

It is very important to make a backup of your Windows registry prior to proceeding with the following instructions. If you are unfamiliar with backing up the registry or registry editing in general, it is strongly recommended that your system administrator make the following changes. The importance of adhering to recommended recovery precautions as listed cannot be overstated. The Corel Corporation assumes no expressed or implied liability for any computer or software damages resulting from the use or misuse of this information.

The workaround to get VBA working for all users:

1. Log on as the Administrator (The one in which installed the application)
2 Click Start - Run
3. Type regedit and hit the Enter key
4. Go to HKEY_CURRENT_USER\SOFTWARE\COREL\CorelDRAW\10.0
5. When the key is highlighted, select REGISTRY - EXPORT REGISTRY FILE
6. Select a path to save the exported registry file that will be accessible to all users
7. Go to HKEY_CURRENT_USER\SOFTWARE\COREL\PHOTO-PAINT\10.0
8. When the key is highlighted, select REGISTRY - EXPORT REGISTRY FILE
9. Select a path to save the exported registry file that will be accessible to all users
10. Now Logoff as the Administrator
11. Logon as one of the users
12. Go to the path where the exported registry files were saved and double click each one
13. Select YES to add to the registry
14. Repeat the last three steps (11-13) for each user

CorelDRAW fails to launch (hourglass disappears).

DocumentID: 206382
Revision Date: 5/7/2001 11:49:28 AM

The information in this document applies to:

CorelDRAW ™ 10

Problem

When launching CorelDRAW, the hourglass appears for a few seconds then disappears.

Answer:

Do a search for msvcrt.dll on your hard drive and rename all instances of this file to msvcrt.old except for the one in the c:\windows\system. Copy msvcrt.dll from the system32 folder on the CD and paste it in c:\. Reboot into DOS (not dos shell) and type in the following, hitting enter after each line

cd windows\system
ren msvcrt.dll msvcrt.old
copy c:\msvcrt.dll

Reboot into Windows. Hold the F8 key and launch CorelDRAW. Release when you're prompted to overwrite the workspace. Click yes to restore the workspace to factory default.

Details:

If running NT on an NTFS partition you will not be able to do this as NT does not have native DOS. If NT is on a FAT partition you can use a Windows 98 boot disk to get into DOS. For Windows 2000, you will need to reboot into safemode with Command Prompt.

Viewing in Wireframe or editing a Barcode in CorelDRAW 10

DocumentID: 206432
Revision Date: 6/20/2001 4:33:12 PM

The information in this document applies to:
CorelDRAW ™ 10

Problem

In CorelDRAW 10, a barcode is inserted as an OLE Object, which cannot be edited once created and will not display in wireframe view. To create a barcode that can be modified (ie. ungrouping the lines or changing the color) follow these steps.

Answer:

1. Click on Start-Programs-CorelDRAW 10-Productivity Tools or click on the Application Launcher on the main toolbar in CorelDRAW 10 and select the Corel BARCODE WIZARD.

2. Follow the steps to create the barcode. Once completed, choose Yes when prompted to copy the barcode to the clipboard.

3. In your document, select Edit-Paste Special... . The Paste Special dialog will appear. Select Paste and choose Picture (Metafile). Click OK and the barcode will appear in the document.

4. The barcode may now be ungrouped from the Arrange menu. It is also viewable in wireframe and can have the lines and colors modified.

Unexpected Condition 5002-units-1782 or -1670

DocumentID: 206446
Revision Date: 6/11/2001 4:52:56 PM

The information in this document applies to:
CorelDRAW ™ 10

Problem

After the installation of Service Pack One the creation of a new document or the selecting of an object in an existing file gives an unexpected condition 5002.

Answer:

Reset the workspace back to the factory defaults. Close the application. Hold the F8 key and relaunch the application. Hold the F8 key until a message appears saying "Are you sure you want to overwrite the current workspace with the factory defaults?" Click Yes to this message and release the F8 key. If the same error appears
check the number of installed fonts and number of temp files.

To check fonts, click Start, Settings, Control Panel. Double click Fonts. In the bottom left hand corner it will state how many fonts are installed. Windows 95, 98, and ME have approximately a 500 font limit. If the number of installed fonts is greater then 500 there may be some corruption. Check for individual font corruption by clicking on the View menu and Details. Click on the word "SIZE" at the top of the third column. This will sort the fonts by size. If any font has a size of 0Kb then it is corrupt and should be removed.

To check for temp files, Click Start, Find, Files or Folders (or Start, Search, for Files or Folders). Type in *.tmp and change the lookin to My Computer or Local Disks. Click Find Now. Delete all the files it finds.

Details:

Unexpected Conditions can be caused by corruption in the workspace, excessive fonts or temp files.

Changing the View of an object in Draw 10

DocumentID: 206447
Revision Date: 6/11/2001 4:13:53 PM

The information in this document applies to:

CorelDRAW ™ 10

When editing an image, there are times when an object needs to be placed in an exact position. However, if the object is filled, it may be difficult to accomplish this. There is a way to change the view of an object.

With the pick tool selected, click on the object with the mouse and hit the Tab key on the keyboard. The view will change from normal to wireframe. This will make it easier to place objects in the exact location on the image.

Product specifications, packaging, technical support and information (*Specifications*) refer to theUnited States retail English version only. Specifications for other versions may vary. Toolbar, Menubar or Color Palettes are missing

DocumentID: 206449
Revision Date: 6/11/2001 4:16:47 PM

The information in this document applies to:

CorelDRAW ™ 10

Problem

The toolbar, menubar or color palettes are missing when the program is opened.

Answer:

Set the program back to the factory default settings. Close the program, hold the F8 key and reopen the application. Hold the F8 until a message appears saying, "Are you sure you want to overwrite the current workspace with the factory defaults?"
Press yes and let go of the F8 key. If the message doesn't appear, the F8 key wasn't held down long enough.

Details:

EPS export tip from draw

DocumentID: 206450
Revision Date: 6/20/2001 4:43:17 PM

The information in this document applies to:

CorelDRAW ™ 10

Convert All Text to Curves - Before submitting a file for processing Click Edit, Select All, Text, then click Arrange, Convert Text to Curves. This will eliminate any potential font problems by changing the fonts to artwork.

Color Selection - Only use colors from the CMYK or Pantone Process Colors Palette

Creating EPS Files for placement in other programs (preferred)

1. Make sure the colors are setup correctly and the text is converted to curves (see above)
2. Select a postscript printer from the printer setup dialog.
3. Select the objects that are to be export (make sure they are on the page, items that bleed off onto the desktop will not work correctly!)
4. Select: File, Export, change the Save as Type to EPS, then check Selected Only, then give a Name to the file then select Export
5. In the Export Dialog Box select:
Export text as Curves
Include Header, 8 bit TIF, 72 dpi
Fountain Steps: 256
Leave all other boxes unchecked, then select OK.

Product specifications, packaging, technical support and information (*Specifications*) refer to theUnited States retail English version only. Specifications for other versions may vary. All Specifications, claims, features, representations, and/or comparisons provided are correct to the best of our knowledge of the date of publication, but are subject to change without notice.OUR MAXIMUM AGGREGATE LIABILITY TO YOU AND THAT OF OUR DEALERS AND SUPPLIERS IS LIMITED. CREATING CUSTOM REGISTRATION MARKS IN DRAW 10

DocumentID: 206462
Revision Date: 6/20/2001 3:50:28 PM

The information in this document applies to:
CorelDRAW ™ 10

When printing in DRAW 10, the default registration marks may not be the correct size or may not be in the correct format. There is the option to create custom registration marks that will appear on all color plates when printing separations.

Follow these steps to create custom registration marks:

1. Create an object that will serve as the registration mark (ie. a circle with an x through it).

2. Group the object together by selecting all the components and choosing Arrange-Group. Now select the grouped object.

3. Select the Outline Pen Dialog by pressing F12 or by selecting it by holding down on the Outline Tool flyout in the Toolbox. Set the desired width and line style. Select Other from Color button. The Select Color window will appear. Choose Registration Color from the Model drop-down list. Click OK till and OK. The registration mark will now appear on all plates.

Product specifications, packaging, technical support and information (*Specifications*) refer to theUnited States retail English version only. Specifications for other versions may vary. All Specifications, claims, features, representations, and/or comparisons provided are correct to the best of our knowledge of the date of publication, but are subject to change without notice.OUR MAXIMUM AGGREGATE LIABILITY TO YOU AND THAT OF OUR DEALERS AND SUPPLIERS IS LIMITED. Error Messages Launching Draw 10
DocumentID: 206463
Revision Date: 7/9/2001 4:30:17 PM

The information in this document applies to:
CorelDRAW ™ 10

Problem

When launching CorelDRAW 10, the following error messages appear:

1. The Kodak Color Management System could not be initialized. Color Management functions will be disabled.

2. A necessary profile could not be loaded. Please reinstall the application to repair this problem.

3. Texture file CORELDRW.TXR could not be found.

4. CdrCpr100.dll could not be found in the programs directory. (this error will occur twice)

DRAW 10 will launch at this point, however, when creating a new document you will get the following:

1. Unexpected condition encountered Condition #5000-DRAWDOC2-0395

2. Failed to create new document (this error will occur twice)

If you try to open a document in DRAW you will get the following:

1. There are no import filters available.

Answer:

Place CorelDRAW 10 CD#1 in the CD-ROM and search the disk for "corelapp.ini" (without quotes). The file is found in Corel\Graphics10\Config.

Copy this file from the CD and Paste into Corel\Graphics10\Config DIR on the hard drive which contains the CorelDRAW application (eg. C:\Program Files\..)

Relaunch CorelDRAW.

TEXT SWITCHES AUTOMATICALLY TO ENGLISH(US) WHEN TYPING TEXT IN CorelDRAW 10

DocumentID: 206464
Revision Date: 6/20/2001 10:04:34 AM

The information in this document applies to:

CorelDRAW ™ 10

Problem

When a language other than English(US) is selected as default in Input Locales under the Windows Regional Options, CorelDRAW 10 automatically reverts back to English when clicking on the document after selecting the Text tool. To resolve this issue, follow the following procedure.

Answer:

1. Ensure that the default language is selected correctly in Windows Regional Options.

2. Open CorelDRAW 10, select Tools-Options. On the left hand side of the screen, click on the word Text within the Workspace expandable menu. On the right hand side of the screen, remove the checkmark from Auto-Keyboard Switching. Click OK to close the Options Window.

3. Now when selecting the Text tool it will use the default language.

Creating Transparencies in Animated GIFS with PhotoPAINT10

DocumentID: 206467
Revision Date: 6/20/2001 4:15:24 PM

The information in this document applies to:
CorelDRAW ™ 10

Problem

Animated Gif files created in PhotoPAINT or RAVE can have transparent backgrounds. To do this, follow the procedure listed below.

Answer:

1. Create or Open the animated GIF in Corel PhotoPAINT 10.

2. Select File, Export. The Export an Image to Disk dialog will appear. Select GIF - CompuServe Bitmap from the Files of Type. Click Save. The GIF89 Animation options will appear.

3. To create a transparency, select the Frame Settings tab. Select a frame on the left hand side and select Image Color on the right. Click on Select Color. Choose the color that should be transparent using the Eyedropper tool and click OK. Click on Apply All. THIS MUST BE DONE FOR ALL FRAMES TO HAVE THE TRANSPARENCY WORK CORRECTLY. THE TRANSPARENT COLOR MUST BE THE SAME IN ALL FRAMES. Once done click OK. Do not open the GIF back into PHOTO-PAINT, it will not display the transparency and the GIF will lose the transparency if saved. This file may be viewied in a Web Browser or HTML editor.

When installing DRAW10 error appears stating "Setup did not complete"

DocumentID: 206480
Revision Date: 7/30/2001 10:46:55 AM

The information in this document applies to:

CorelDRAW ™ 10

Problem

When installing Draw 10 this internal error comes up. The only option is OK, then the message "Setup did not complete, you must try again."

Answer:

Uninstall the Trial version of Draw 10 from the system using the Add/Remove Programs in the Control Panel. Go into the Windows Explorer and ensure that all the files from the Trial version of Draw 10 are gone. Reboot. Install the full version of Draw 10.

Details:

If that still does not allow the installation to finish look for VBOX and delete all the entries it finds.

Line not found in Registry when launching Corel Texture and/or Corel Texture Batcher
DocumentID: 206501
Revision Date: 6/26/2001 1:34:06 PM

The information in this document applies to:
CorelDRAW ™ 10

Problem

When trying to launch the sub-applications Corel Texture and/or Corel Texture Batcher, an error appears stating "Line not Found in Registry" or "Goodies not Found", when logged in as a member of the "User" group in WinNT/2000.

Answer:

Follow these steps in order to launch the applications successfully.

1. Login as administrator.

2. Run Regedit

3. Browse to HKEY_CURRENT_USER\Software\Corel

4. Export the following keys to the root of C:
- Corel Texture
- Texture Batcher

5. Log off Administrator and login as a user.

6. Execute the two exported reg keys.

One thing to note, every user who's a member of the 'User' group will need to double click the reg files in order to run the application.

Accessing Clipart Copied to the Network
DocumentID: 206509
Revision Date: 7/10/2001 4:34:23 PM

The information in this document applies to:
CorelDRAW ™ 10

Problem

Clipart images on a network location cannot be accessed through the initial screen of the scrapbook.

Answer:

NOTE:This requires editing the registry so follow these instruction very carefully.
1. The volume label on the drive that is shared out MUST begin with the word "Clipart". (i.e. ClipartNet, Clipart1, Clipart2, etc.)
2. On the local system, map a drive letter to the network share (i.e. X:\).
3. Copy the contents of the clipart CD to the mapped network share.
4. On the local system, run REGEDIT.
5. Browse to the HKEY_LOCAL_MACHINE\Software\COREL\Media.6. Highlight the 'Media' folder.
7. Click on Edit, New, Key.
8. Type a name for the key (i.e. ClipartNet)
9. With the new key (i.e. ClipartNet) highlighted, click on Edit, New, String Value.
10. Type "Path" for the name of the String Value.
11. Double-click on the String Value and enter the mapped drive letter for the local system. (see step 2)
12. Click on Edit, New, String Value.
13. Type "VolumeLabel" for the name of this String Value.
14. Double-click on the String Value and enter the volume label from Step #1. (i.e. ClipartNet)
15. Click Edit, New, DWORD Value.
16. Type "Type" for the DWORD Value.
17. Double-click on the DWORD Value and enter a value of 3.
18. Close REGEDIT.
NOTE: This will need to be done for each workstation. If all operating systems are the same, export the newly created reg key and execute it on each workstation. Just make sure that when the drives are mapped to the clipart share that each computer assigns the map to the same drive letter. Otherwise the drive letter will require changing, as per instruction # 2 , 11. Once this is done, a new icon will be visible in the scrapbook which is 'live' (it won't be greyed out).

Details:

Unfortunately, the search index is hard coded into the application and will prevent you from pointing the search to the network share. The good news is that there's a utility you can download called ROMCat. It provides advanced functionality over the search features
in CorelDRAW 10. Furthermore, it's freeware. It will create a catalog of all the clipart/photos on the network share and allow the same functionality of the search engine in CorelDRAW, while also allowing you to generate thumbnail previews of all the images shared over the network. Here's the link:http://www.unleash.com/articles/romcat/ When downloading the utility, make sure you choose the 'Download
ROMCat 4.2 Software' and not the prebuilt library for D10 (as you'll have to create the library and point to the network share). Although this isn't officially supported by Corel, we recommend and even use the utility in-house.

No Writing Tools Installed error message when choose Spell Checker

DocumentID: 206523
Revision Date: 7/12/2001 11:46:49 AM

The information in this document applies to:

CorelDRAW ™ 10

Problem

After clicking on Text, Writing Tools, and anything below it an error appears stating "No Writing Tools have been Installed".

Answer:

Click on Start, Programs, CorelDRAW10, Setup and Notes, Corel Uninstaller. Choose writing tools below CorelDRAW10. Click Next and continue through the uninstaller. After the uninstallation is complete reboot the computer. After rebooting verify that the x:\Program Files\Corel\Shared directory is gone. If it is not gone this may mean that another Corel program has installed writing tools and they may need to be uninstalled. If it is gone then put your CD#1 in and start the installation. Choose Add Components. Click Next past the screen showing Main Applications. On the next screen choose English and change the default language to English. Continue through the installation. After the installation launch DRAW and see if the writing tools work.

Cannot install Draw 10, Internal Error 2711, Bitstream Font Navigator

DocumentID: 206534
Revision Date: 7/30/2001 10:30:19 AM

The information in this document applies to:

CorelDRAW ™ 10

Problem

When trying to install Corel Draw 10 on your system, the setup does not complete and the following error is indicated "Internal Error 2711 with reference to Bitstream Font Navigator" This usually occurs when one has had the trial version on the system.

Answer:

Click Start, Settings, Control Panel, Double click Add/Remove Programs. Select CorelDRAW_TV or Corel Applications. Uninstall DRAW10. Search for the file "CorelDRAW 10_TV.msi". Right click on the file (with the right mouse button) and choose the option to uninstall. If this file is not available do a search for *.msi. This will return all msi files. Right click each and click Properties. Find the file related to CorelDRAW10 and then right click and choose Uninstall. Then try installing again.

Details:

Configdir not found in the registry
DocumentID: 206556
Revision Date: 8/4/2001 9:45:34 AM

The information in this document applies to:
CorelDRAW ™ 10

Problem

On opening of CorelDRAW10 an error appears stating "configdir not found in the registry" and the program closes.

Answer:

It is very important to make a backup of your Windows registry prior to proceeding with the following instructions. If you are unfamiliar with backing up the registry or registry editing in general, it is strongly recommended that your system administrator make the following changes. The importance of adhering to recommended recovery precautions as listed cannot be overstated. The Corel Corporation assumes no expressed or implied liability for any computer or software damages resulting from the use or misuse of this information.

1. Click Start - Run

2. Type Regedit and hit the Enter key

3. Go to HKEY_LOCAL_MACHINE\Software\Corel\CorelDRAW\10.0

4. Verify there is an entry called ConfigDir

5a. If this entry exists, rightclick it and choose Modify. Verify the path is the installation path (ie. c:\Programs Files\Corel\Graphics 10\Config)

5b. If this entry does not exist, right click on the right hand side and choose New String Value

7. Rename it ConfigDir and hit Enter

8. Right click the new string and choose modify

9. Enter the correct installation path in the Value Data field (ie. C:\Program Files\Corel\Graphics10\Config)

9. Click OK to close the Edit String window and click Registry, Exit

10. Relaunch CorelDRAW.

Details:

Configdir not found in the registry

Converting Scripts to Draw 10
DocumentID: 206584
Revision Date: 8/22/2001 2:54:51 PM

The information in this document applies to:
CorelDRAW ™ 10

Problem

Scripts created in previous versions of Draw will not execute in Draw 10

Answer:

Draw 10 now uses VBA and one way to convert scripts from Draw 9 to Draw 10 VBA is to change the lines - WithObject "CorelDRAW.Automation.9" to WithObject "CorelDRAW.Automation.10"
-and to upgrade to VBA- Wherever you see With Object "CorelDRAW.Automation.9" change it to With CorelScript and change the End WithObject line to End With.
- Or to rewrite the Script using the VBA editor. This choice being the best and most effecient.

Location of shared file is greyed out when installing Draw10 Upgrade

DocumentID: 206586
Revision Date: 8/24/2001 11:31:06 AM

The information in this document applies to:
CorelDRAW ™ 10

Problem

Location of shared file is greyed out when installing Draw 10 Upgrade

Answer:

A previous Corel product was installed to a drive letter that since then has been removed and replaced by a CDROM or CDRW drive.

The applications must be uninstalled and the system then rebooted. When reinstalling those apps or the upgrade to CorelDraw10, the option will appear to choose a different shared files location.

Monotone bitmap will not print when printing separations

DocumentID: 206620

Revision Date: 8/24/2001 11:50:21 AM

The information in this document applies to:

CorelDRAW ™ 10

Problem

After having converted an image to a Monotone bitmap, the image does not show up when printing separations.

Answer:

The image must be converted to a bitmap without a transparent background. The transparent background is what is preventing the image from appearing on a separations plate.

Details:

Cannot install Draw10MAC on the OSX partition of a dual boot system

DocumentID: 206724
Revision Date: 10/11/2001 12:02:15 PM

The information in this document applies to:

CorelDRAW ™ 10

Problem

When installing Draw10 MAC under the OSX partition of a dual boot system various errors will appear.

Answer:

Workaround
Reboot to another partion (ie. OS 9.2 or lower), and install Draw10 MAC. Reboot into OS X, and DRAW will be fully accessable.

Details:

Draw 10 MAC keeps crashing

DocumentID: 206726

Revision Date: 10/11/2001 12:17:50 PM

The information in this document applies to:

CorelDRAW ™ 10

Problem

With virtual memory turned off, Draw10 on Mac OS 9.2 or lower keeps crashing.

Answer:

Virtual memory must be on for all OS9.2 or lower systems that run Draw10MAC.
Go the Apple Menu, click on Control Menu, click on Memory. In the Memory box, click to turn on Virtual Memory.

How to overright current workspace with the factory defaults in DRAW10 MAC?

DocumentID: 206727
Revision Date: 10/11/2001 12:23:59 PM

The information in this document applies to:
CorelDRAW ™ 10

Problem

Sometimes it is necessary to go back to the default workspace (ie. a menu bar or toolbar disappears or general corruption of the workspace)

Answer:

Launch CorelDraw10 MAC. Right away, press and hold the SHIFT key. A message will appear prompting to overright the current workspace with the factory defaults. Release the SHIFT key and choose yes.

Details:

Cannot launch CorelDRAW 10 after installing service pack 2

DocumentID: 206800
Revision Date: 1/16/2002 11:35:54 AM

The information in this document applies to:

CorelDRAW ™ 10

Problem

After installing service pack 2, the following files get truncated, CorelDRW100.dll to CORELD~1.dll and cdrfnt100.dll to CDRFNT~1.dll. This will prevent the launch of CorelDRAW 10, PHOTO-PAINT 10 and R.A.V.E. 1.0.
This may occur as a result of Norton Utilities being resident in memory during the installation of service pack 2.

Answer:

To correct this, rename the following files in the programs directory (x:\program files\corel\graphics10\programs)
CORELD~1.dll to CorelDRW100.dll
CDRFNT~1.dll to cdrfnt100.dll

Details:

In addition to the two previously mentioned files, you may also see CORELD~2.dll and CDRFNT~2.dll. If this is the case, rename the first two and delete all other occurrences.

Product specifications, packaging, technical support and information (*Specifications*) refer to theUnited States retail English version only. Specifications for other versions may vary. Message "Invalid directory specified in corelapp.ini" when launching CorelDRAW 10/9 on Windows 2000

DocumentID: 206825
Revision Date: 1/14/2002 1:39:21 PM

The information in this document applies to:

CorelDRAW ™ 10

Problem

'Invalid directory specified in corelapp.ini' occurs when launching CorelDRAW 9 or 10 on Windows 2000. This occurs as a result of user permissions on NTFS formatted systems. Typically, this problem will occur when trying to run CorelDRAW 9 or 10 as a member of the 'user' group.

Answer:

There are two solutions to corect this problem.
1. Make the user a member of the 'Power User' group (for information on how to change group membership, contact Microsoft).
2. Give the user group 'full' access to the graphics10 folder (X:\Program files\corel\graphics10) Replace 10 with 9 if running CorelDRAW 9.

Details:

"Cannot Create Effect Component" message when accessing bitmap effects in CorelDRAW/PHOTO-PAINT 10

DocumentID: 206826
Revision Date: 1/14/2002 1:40:55 PM

The information in this document applies to:

CorelDRAW ™ 10

Problem

'Cannot Create Effect Component' when accessing bitmap effects after having installed CorelDRAW 10 Service Pack 1. This may occur as a result of having TSR's loaded into memory which had conflicted with the installation process (Anti-Virus software, program utilities etc.)

Answer:

To correct this issue, do the following:
1. Uninstall CorelDRAW 10 Graphic Suite.
2. Reboot your computer.
3. Reinstall the application.
4. Reboot into Safe Mode.
5. Install Service Pack 1 in Safe Mode.
6. Reboot into Windows.

Details:

Alternatively, you can turn off all background processes prior to installing Service Pack 1 rather than booting into Safe Mode. Safe Mode simply insures that all unnecessary processes which may interfere with the installation routine are no longer running.

Performance issues as a result of editing text in CorelDRAW 10

DocumentID: 206827
Revision Date: 1/14/2002 1:39:35 PM

The information in this document applies to:
CorelDRAW ™ 10

Problem

Performance of CorelDRAW 10 deteriorates as a result of working with text. Symptoms include the following:
- Application menus do not respond immediately.
- Various text editing problems.
- Frequent system crashes when editing text.

Answer:

Corel has fixed this issue in Service Pack 2 for CorelDRAW 10. To download this fix, please visit the following URL:

http://www.corel.com/support/ftpsite/pub/coreldraw/draw10suite/index.htm

Cannot print lenses correctly to a non-Postscript device

DocumentID: 206830
Revision Date: 1/16/2002 2:30:30 PM

The information in this document applies to:
CorelDRAW ™ 10

Problem

Applying a lens effect to an object in CorelDRAW 10 does not output correctly, even though it appears correctly in print preview.

Answer:

This is an issue with printing lens effects from print preview with certain print drivers. To resolve this, close print preview prior to printing.

Details:
